Document Name	Order Basic Payment Bundle - Order Capture & Product Inventory
Document Version	Version 1
Document Date	26 March 2025
HL Journey	I Order Basic Payment Bundle

1 Introduction

1.1 Purpose and Scope

The Amdocs Commerce microservice provides a variety of business components that support diverse commerce workflows.

This document outlines the functionalities, business flows, and subdomains that enable customers to apply for a new **Basic Payment Bundle** within the banking system, utilizing the **Amdocs Commerce Microservice**

Line Of Business

Payment Account & Debit Card products

Customer Segment

B2C (Business-to-Consumer) Banking Customer

Channels

Internet Banking (Self-Service)

1.2 Business Needs

As an existing customer, I would like to apply for a new Basic Payment Account bundle, which includes a Payment Account and a Debit Card products.

Upon submission, I want my new order to be sent for fulfillment, which will create the products in my inventory (the master record of customer-owned products remains in ABN AMRO system)

1.3 Application Involved

Application	Description	Provider	Impacted
Catalog ONE	Amdocs Product Catalog (Catalog ONE) enables the management of offers, products, and accessories. It defines product characteristics, rules, pricing policies, and eligibility conditions. The Basic Payment Bundle will be created in Catalog One to support the Bundle ordering for ABN AMRO.	Amdocs	Yes

Application	Description	Provider	Impacted
Digital ONE	Amdocs Digital ONE provides a set of value-based, self-contained business functions which support diverse commerce and care workflows. The following business functions will be used in ABN AMRO banking solution: • Commerce Microservices domain business functions that enable user to drive a specific commerce flow. View catalog data (Discovery) and gather necessary information to create and submit an order. • Amdocs Order Management domain, named also Order Handling manages the order execution and fulfillment required for after submission. • Product Inventory Management domain is responsible for tracking customer-owned products in DigitalONE.	Amdocs	Yes
BCDB AMRO Business Customer DB	The BCDB application is the ABN AMRO banking environment provides a set of APIs to retrieve customer information. Digital ONE will retrieve customer party attributes from the BCDB party details API. It will be used by the Commerce Microservices internally.	ABN AMRO	No

1.4 Related Document

Document ID	Type	Document Name
BCDB party details	PDF	Party Management API-v46-20250120_100911

1.5 Assumptions

ID	Item	Description
01	Business Flow	The business flows and diagrams in this document represent best practices and may be modified in future epics. However, all the backend components outlined in these diagrams are part of the committed scope. It describes the logical steps and integration points with Amdocs Microservices and ABN AMRO systems. These flows do not represent a specific UI application. Any screenshots included in the document are for illustration and reference purposes only.
02	One Product Offering	As requested, this flow handles a single payment bundle per Order.
03	Modify Order	As requested, modifying an order (changing a draft order or amending a submitted order) is not part of the scope. However, the D1 system can support this functionality.
04	Charging	ABN AMRO systems will be responsible for notifying the ABN AMRO charging system.
05	Debit Card	The Debit Card will be associated to the Payment Account within the order
06	Product Inventory	Although Digital ONE stores the product inventory, the master record of customer-owned products remains in ABN AMRO system.
07	Qualification	Digital ONE will map the party details attributes for qualification rules as part of the BCDB Integration in this EPIC, while Catalog Implementation and Certification will be handled in a separate EPIC.
08	One Customer	• Customer Requestor (Creator): The customer who logs in and places the order, either for himself or on behalf of another customer. • Receiver (BC ID): The customer to whom the product will belong. The receiver can be either the customer requestor or a different customer. A Product Order and Product Inventory are owned by a single customer receiver. For this EPIC, the receiver is assumed to be the Customer Requestor.

1.6 Terms & Definitions

Term	Definition
C1 / CatalogONE	Amdocs CatalogONE is an online product catalog based on TM Forum standards. It enables the management of commercial offerings and product definitions.
D1 / DigitalONE	Amdocs DigitalONE consists of a set of functional capabilities used to handle the ordering flow, including order capture and fulfillment.
OC	Amdocs D1 Order Capture (OC) solution consists of a set of functional capabilities used to handle the negotiation of the order before submission
AOM	The Amdocs Order Management (AOM) solution consists of a set of functional capabilities used to handle the order after submission and for Amdocs Order Fulfillment.

2 High Level Solution

2.1 Overview

Document describes the **Basic Payment Bundle** ordering flow using the **CatalogONE**, **Digital ONE** and **ABN AMRO Systems**.

2.1.1 CatalogONE

The Basic Payment Bundle will be structured as a Product Offering, including its associated products:

- Payment Account
- Debit Card

For navigating catalog data, Catalog One will define browsing categories and their associated filter characteristics.

The bundle and its products will include characteristic metadata, with discovery settings such as filterable and viewable, where applicable.

2.1.2 Customer Identification

Customer Identification is the process of creating (if required) and verifying a customer's identity to ensure customer is an ABN AMRO customer.

It will be performed before user starts the ordering flow (Outside Digital ONE)

2.1.3 Order Capture

The order capture process is responsible for discovery and collecting the necessary information to create and submit an order

The Amdocs Commerce component will expose a set of operations to support the end-to-end (E2E) order capture sales process flow.

In this EPIC, order capture will include the following main steps:

- **Browse Catalog** - Navigating and finding a suitable offering
- **Order Creation** - Create an order with the selected offering.
- **View Summary** - View the details of the order, including the bundle and its associated products
- **Order Submission** - Submit the order to fulfillment

Qualification & Eligibility - Will be handled in a separate EPIC.

Additional Steps - Additional order capture steps, such as IBAN reservation, approval and proposal generation will be handled in a separate EPIC.

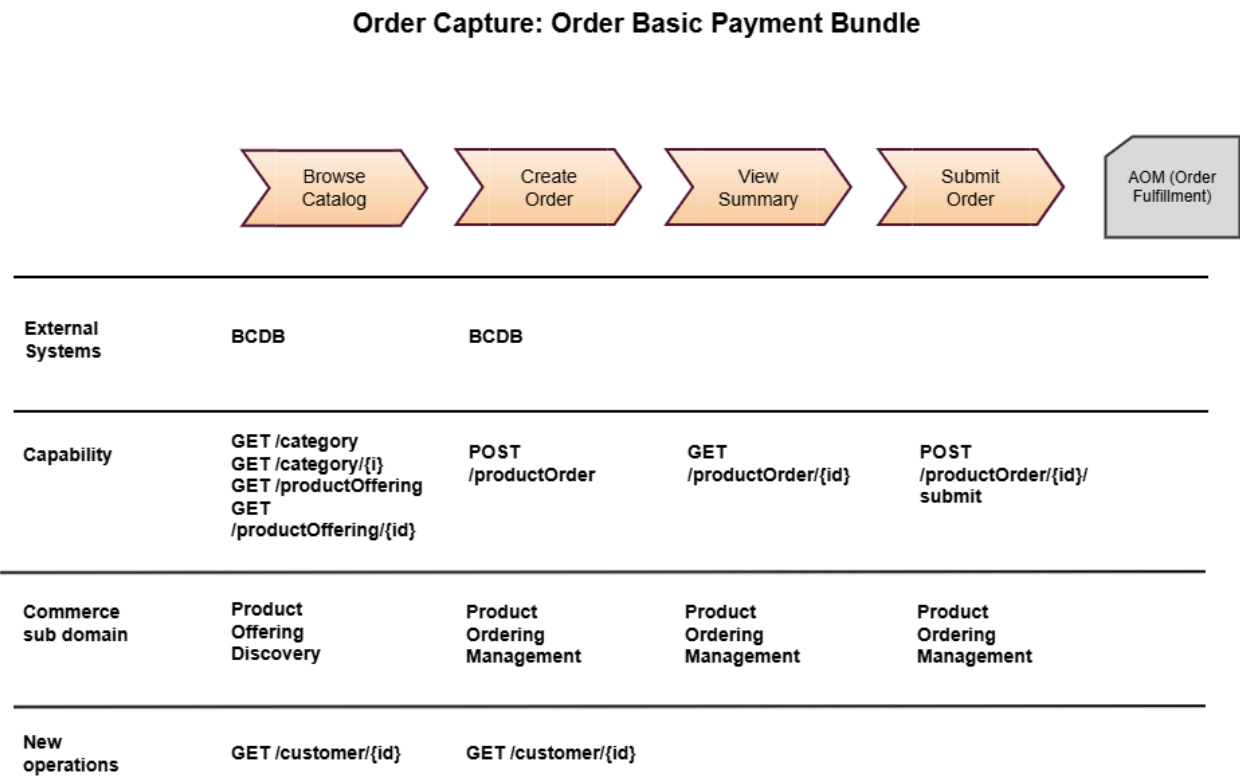

2.1.4 Order Fulfillment

The order fulfillment, managed by the Amdocs Ordering Management component, will handle the order execution process after submission (Business Process Map).
It will also be responsible for creating the products in the Digital One inventory system.
The creation of the products in ABN AMRO's systems will be handled in a separate EPIC

2.2 Business Flows

2.2.1 Flow Diagram

- The **Activity** steps in the diagram are provided for clarity and reference purposes only.

2.2.2 Flow Description

The Order Capture process solution consists of a set of functional steps that are used to capture order details and submit the order for fulfillment.

Step	Description	Commerce Sub Domain
Browse Catalog	Browse Catalog enable customer for viewing the catalog data and finding a suitable offering. Browse Bundle consists of the following capabilities: • Browse Category - Viewing the list of categories from Catalog ONE. The list is structured as a tree, beginning with the root category and including subcategories. • View Offering List - Viewing list of sellable Product Offering as defined by CatalogONE. It can be retrieved by browsing category (e.g. Payment Bundle) or by Relation Role (e.g.- 'Bundles'). • Filter Offering List - capability enables searching for catalog data and finding a suitable bundle package. • Sort Offering List • View Product Offering Details	Product Offering Discovery
Create Order	Create an order that includes the selected Product Offering and its associated products. Before creating the order, validation will be performed.	Product Ordering Management
View Summary	The summary capability offers a comprehensive view of all order items, including their prices (if applicable), before the final order is submitted.	Product Ordering Management
Submit Order	Submit the order and send the order for fulfillment.	Product Ordering Management

2.3 Business Use Cases

Use Case ID	Description	Expected Outcome
#01	Customer orders a Basic Bundle Payment Account	As an existing customer (owner), the customer would like to apply for a new Basic Payment Account Bundle, which includes a Payment Account and a Debit Card. The customer should be able to navigate and view catalog data, create and submit an order for fulfillment. The D1 fulfillment process will generate a record in Digital ONE.

3 D1 Order Capture

The Order Basic Payment Bundle flow allows an existing customer to apply for a new bundle payment offering, which includes a Payment Account and Direct Debit products.

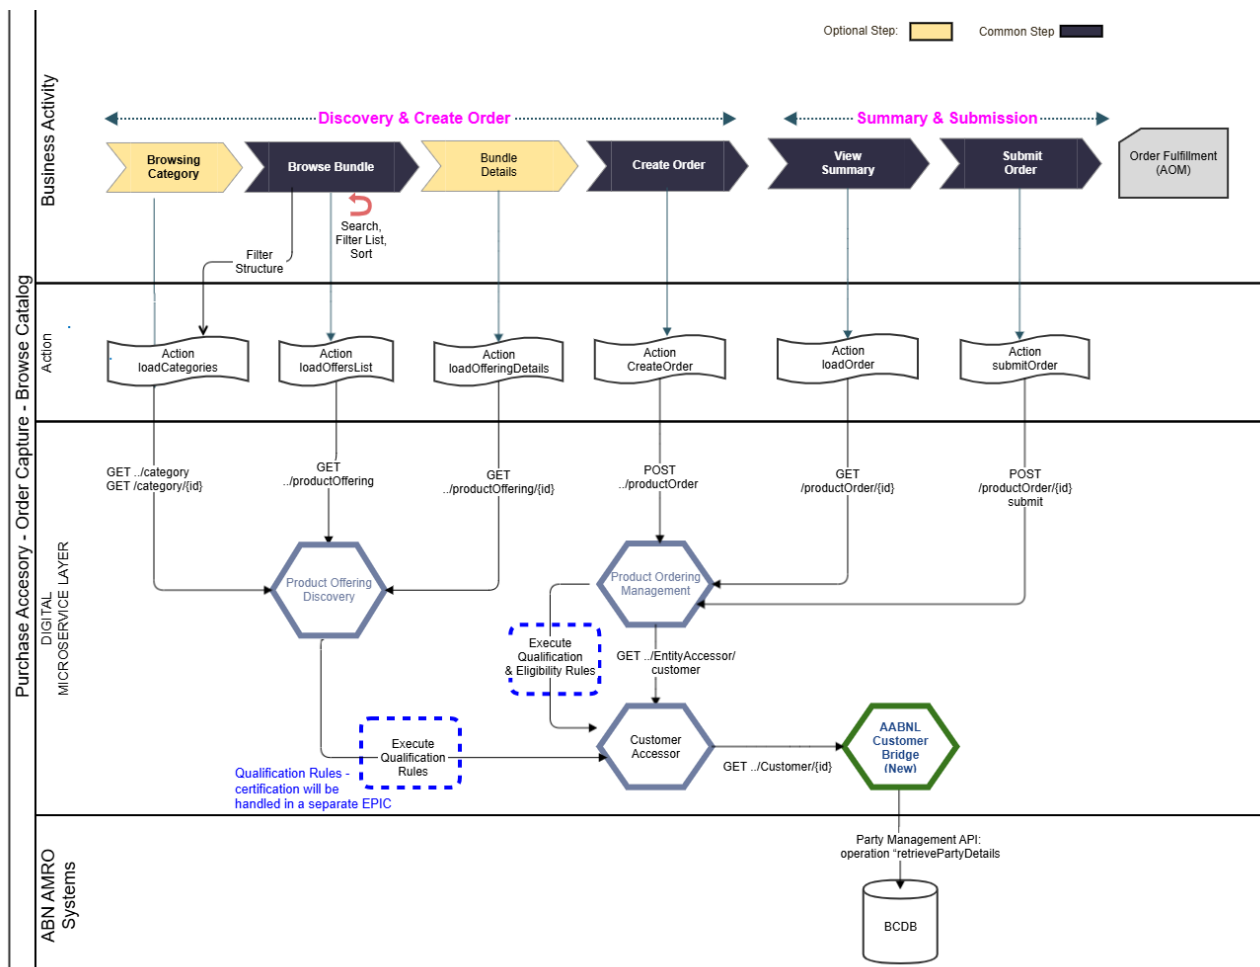

This chapter describes the order capture flow including the logical step, and the integration points to the Amdocs Microservices & ABN AMRO Systems.

The flows do not describe a specific UI application. Screenshots in this chapter are just for illustration only (not part of Amdocs Scope).

3.1 Flow Diagram

3.1.1 Diagram

- The **Business Activity** steps in the diagram are provided for clarity and reference purposes only.

3.1.2 Action Integration Point

Action	Commerce Sub Domain	REST API	Description
loadCategories	Product Offering Discovery	GET /category	Retrieve catalog browsing categories and child categories by sale channel.
loadCategoryFilters	Product Offering Discovery	GET /category/{id}	Retrieves the category detail and its filter characteristic's.
loadOffersList	Product Offering Discovery	GET /productOffering	Retrieving the list of Product Offering by filtering criteria.
loadOfferingDetails	Product Offering Discovery	GET /productOffering/{id}	Retrieving the details of a specific Product Offering by ID
createOrder	Product Ordering Management	POST /productOrder/	Creates a product order.
loadOrder	Product Ordering Management	GET /productOrder/{id}	Retrieve the order details.
submitOrder	Product Ordering Management	POST /productOrder/{id}/submitOrder	Submits a product order entity to Amdocs Order Management for its fulfillment, after performing the preconfigured required validations. The state of the product order entity is set to <i>Submitted</i> .

3.2 Solution Details

3.2.1 Browse Category

3.2.1.1 Overview

Optional Step

Categories are used to browse and navigate product offerings, assisting the end-user in catalog discovery.

Categories that contain other categories represent category trees, where each tree has a root category, and the root category is associated with a sales channel.

Multiple category trees can be associated with the same sales channel.

Leaf categories will be linked to product offerings.

The **Browse Category** capability (GET /category) enables retrieving a category list from the Amdocs Catalog by sales channel.

Each category in the list is returned with its category code (a unique name) and category display name.

Additionally, the Category Details capability (GET /category/{id}) allows retrieving a specific category using its identifier (either ID or name).

Category information, including filter characteristics as defined by the Catalog ONE, may also be returned.

3.2.1.2 Customization

N/A

3.2.1.3 Sequence Diagram

N/A

3.2.1.4 Integration Point

Functionality	Application	Operation	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Retrieve Browsing Categories tree	Amdocs Commerce Product Offering Discovery subdomain	GET / category	This operation retrieves catalog-browsing categories and child categories by sale channel.	Amdocs	EXP UI	REST	Sync	Southbound
Retrieve Specific Browsing Category	Amdocs Commerce Product Offering Discovery subdomain	GET / category/{id}	This operations retrieves catalog-browsing category information including filter characteristic's, that includes all the sub-categories, for a specific category retrieved by category ID.	Amdocs	EXP UI	REST	Sync	Southbound

3.2.1.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Successful Category List Retrieval by Sales Channel	GIVEN the user requests to retrieve the category list via the Browse Category capability (GET / category)	a valid sales channel is provided	the system returns the category tree associated with the provided sales channel

Test Name	GIVEN	WHEN	THEN
Successful Retrieval of Specific Category Details	GIVEN the user requests the details of a specific category via the Category Details capability (GET /category/{id})	a valid category identifier (either ID or name) is provided	THEN the system returns the full details of the category, including: • Category Code • Category Display Name • Filter Characteristics (if defined in Catalog ONE)

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
Empty Category List	the user attempts to retrieve specific tree by sale channel	No tree defined in C1, for the sale channel	The system returns empty list.

3.2.1.6 Screenshot (For Illustration only)

N/A

3.2.2 Browse Catalog

3.2.2.1 Overview

The **Browse Catalog** functionality utilizes the **Search Product Offering** capability to display a list of sellable product offerings from **CatalogONE**.

Retrieving Product Offerings

product offerings can be retrieved based on the following criteria:

- **Browsing Category** – Fetches all product offerings within a specific category (e.g., 'Payment Bundle' category).
- **Relation Role** – Retrieves product offerings based on their business type, such as Payment Bundles or Debit Cards.

By default, product offerings are displayed in order of priority as defined in CatalogONE, from highest to lowest.

Search, Filtering, and Sorting Capabilities

The **Search Product Offering** feature allows for advanced filtering, searching, and sorting of the product offering list based on CatalogONE definition:

- **Filtering Product Offering** - Filtering enables retrieving product offerings based on characteristics defined as filterable (e.g., Business Line, Payment Category).
- **Searching Product Offering** - Users can refine the product offering list using free-text search, which applies to:
 - The product offering's **code** (unique name) or **display name**.
 - The **description** of the product offering.
 - **Searchable characteristics** defined in Amdocs Catalog, such as filtering all product offerings where 'Business Line' is 'Payments'.
 - **Search Rules:** Case-insensitive., Requires a minimum of three characters.
- **Sorting Product Offering** - Users can sort product offerings by:
 - **Newest First** – Based on creation date and time.
 - **Price** – Low to High or High to Low. Sorts by one-time charge or recurring charge (if both exist, sorting is based on one-time charge).
 - **Alphabetical Order** – Arranges product offerings by name (A–Z or Z–A).

Product Offering Details

The capability returns offers along with their corresponding details, including the **offer name, price (if applicable), short description, and offer characteristics**.

3.2.2.2 Customization

Digital ONE retrieves customer party attributes using a new GET /customer/{id} operation. The new operation will be introduced to fetch real-time data from the BCDB party details API.

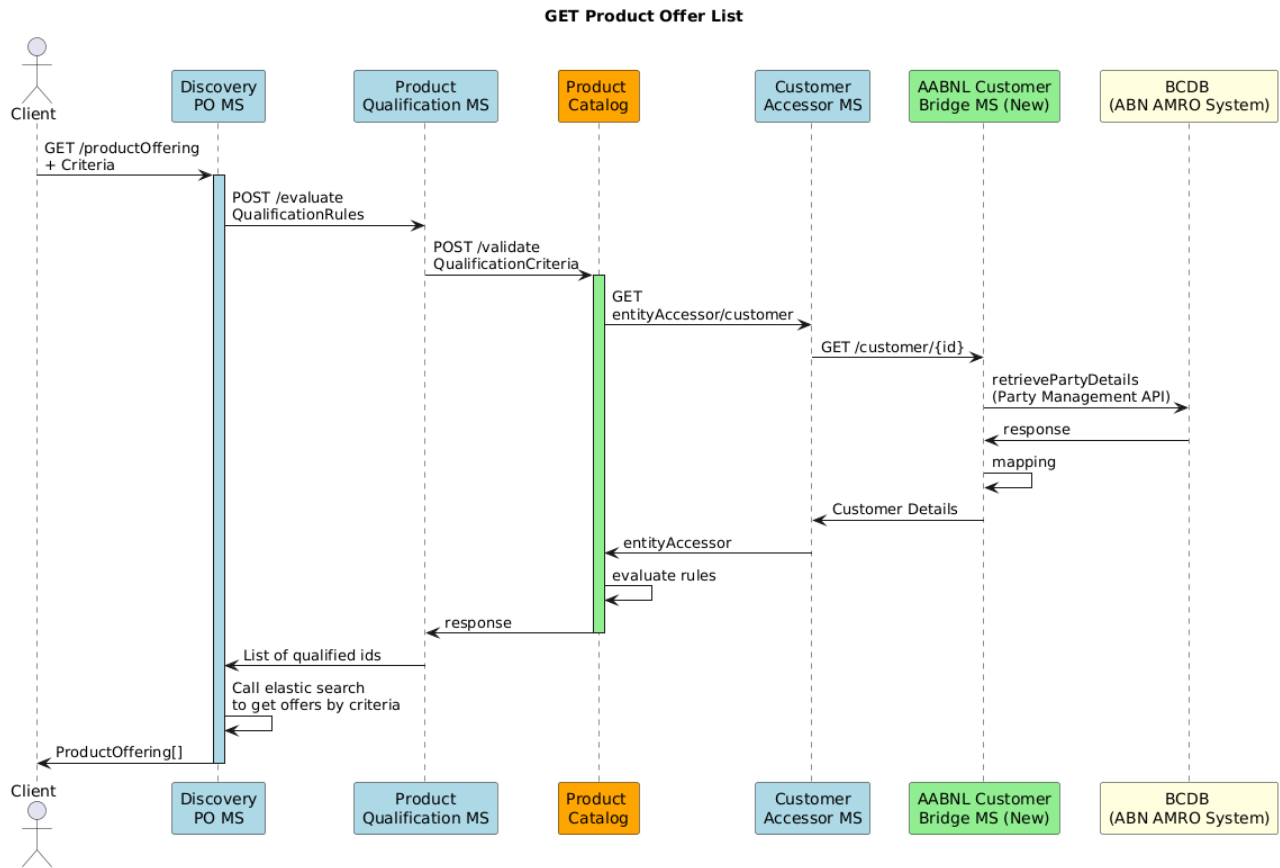

The following BCDB party details will be mapped to Digital ONE:

- registrationStatus
- relationCategory
- clientGroupCode
- dateOfBirth.
- deceaseDateExists
- apperanceType

3.2.2.3 Integration Point

Functionality	Application	Operation	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Retrieve product offering list	Amdocs Commerce Product Offering Discovery subdomain	GET .. \productOffering	Retrieving the list of Product Offering by filtering criteria. The capability supports both anonymous customers and existing customers.	Amdocs	EXP UI	REST	Sync	Southbound
Retrieve Party Details	BCDB AMRO Business Customer DB	retrievePartyDetails operation	retrieve party details	ABN AMRO	Amdocs	SOAP	Sync	Southbound

3.2.2.4 Sequence Diagram

3.2.2.5 Acceptance Criteria

Sunny Day Scenario

Search Product Offering

Test Name	GIVEN	WHEN	THEN
Successful Retrieval of Product Offerings by Category	GIVEN a user selects a specific browsing category (e.g., 'Payment Bundle' category)	WHEN the Search Product Offering functionality is used	THEN The system retrieves and displays all sellable product offerings within the selected category from CatalogONE AND the product offerings are displayed in order of priority as defined in CatalogONE

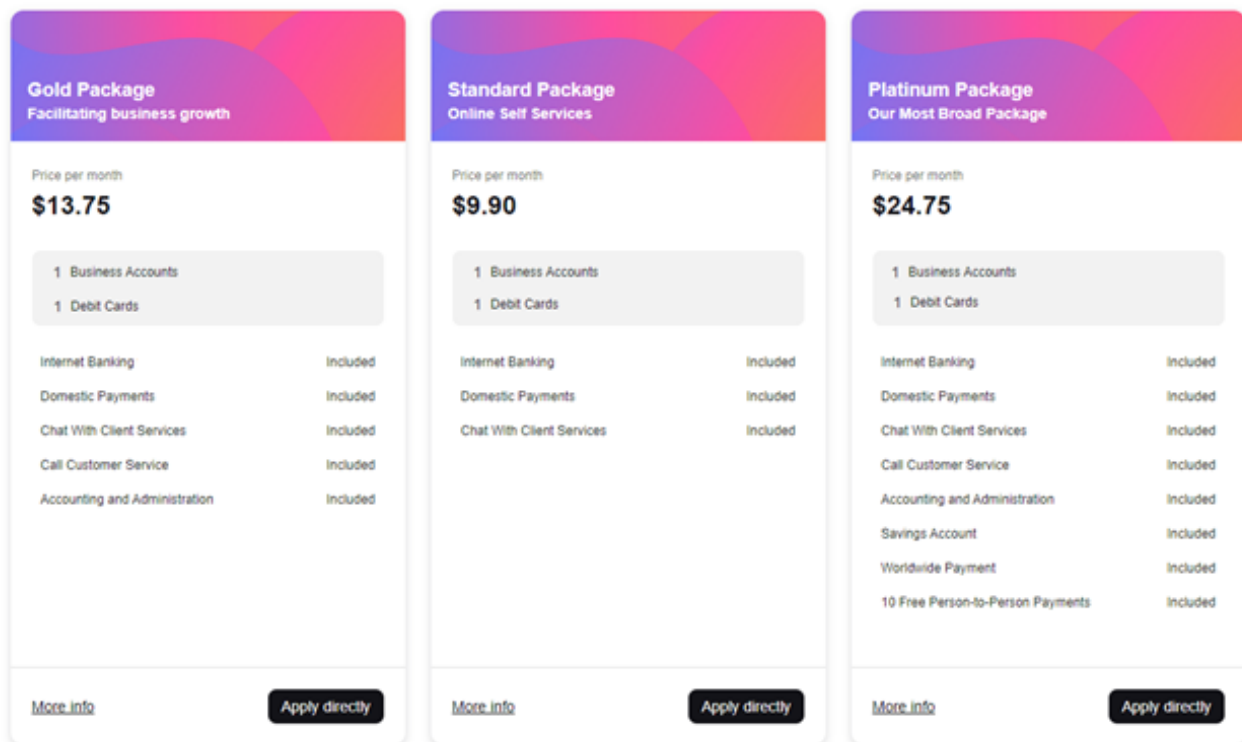

Test Name	GIVEN	WHEN	THEN
Successful Retrieval of Product Offerings by Relation Role	GIVEN a user requests product offerings based on a specific relation role (e.g., Payment Bundles or Debit Cards)	WHEN the Search Product Offering functionality is used	THEN the system retrieves and displays product offerings that match the specified relation role
Filtering Product Offerings Based on Characteristics	GIVEN a user applies filters using filterable characteristics (e.g., Business Line, Payment Category)	WHEN the Search Product Offering functionality is used	THEN the system retrieves and displays only the product offerings that meet the selected filter criteria
Search by Free Text	GIVEN a user enters a search text in the free-text search field	WHEN the search text matches the product offering's code (unique name) or display name	THEN the system retrieves and displays product offerings that match the search criteria
Sorting Product Offerings by Newest First	GIVEN a user selects Newest First sorting	WHEN the Search Product Offering functionality is used	THEN the system arranges them by creation date and time, with the newest product offerings appearing first
Sorting Product Offerings Alphabetically	GIVEN a user selects sorting by Alphabetical Order (A-Z or Z-A)	WHEN the Search Product Offering functionality is used	THEN the system arranges them in ascending (A-Z) or descending (Z-A) alphabetical order based on the product offering's display name
Search for Anonymous	GIVEN an anonymous customer selects a specific browsing category	WHEN the Search Product Offering functionality is used	THEN The system retrieves and displays all product offerings within the selected category from CatalogONE AND Only offers which anonymous customer is allowed to view are returned.

Test Name	GIVEN	WHEN	THEN
Search for Existing Customer	GIVEN an existing customer selects a specific browsing category	WHEN the Search Product Offering functionality is used	THEN The system retrieves and displays all product offerings within the selected category from CatalogONE AND Only offers which the existing customer is allowed to view are returned.

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
Customer ID Does Not Exist	GIVEN an non-existent customer ID is provided	WHEN the GET / customer/{id} operation is called	THEN the system returns a CUSTOMER_NOT_FOUND error.

3.2.2.6 Screenshot (For Illustration only)

3.2.3 Product Offering Details

3.2.3.1 Overview

The **Product Offering Details** capability allows for the retrieval of comprehensive information about a specific product offering from the **Amdocs Catalog**. It pulls data according to the default configurations defined within the catalog.

This capability provides the following main information:

- **Product Offering Name and Localized Name:** The official name and localized name display name of the product offering, as defined in the catalog.
- **Product Description:** A detailed description of the product offering, outlining its features, benefits, and intended use, as configured in the catalog.
- **Related Products:** the associated products.
- **Characteristics-** List of characteristics for the product offering.
- **Pricing Information:** Any associated pricing as configured in **Catalog ONE**

3.2.3.2 Customization

N/A

3.2.3.3 Sequence Diagram

N/A

3.2.3.4 Integration Point

Functionality	Application	API	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Product Offering Details	Amdocs Commerce	Product Offering Discovery subdomain GET .. \productOffering/{id}	Retrieving the Product Offering by id.	Amdocs	EXP UI	REST	Syn c	South bound

3.2.3.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Successful Retrieval of Product Offering Details	the user retrieves the product offering details via the Product Offering Details capability (GET / productOffering/ {id})	a valid Product Offering ID is provided	the system returns information about the product offering.

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
Product Offering ID - Not Found	the user attempts to retrieve product offering details	a Product Offering ID which is not provided	The system returns an error message indicating that the Product Offering ID is not found

3.2.3.6 Screenshot (For Illustration only)

N/A

3.2.4 Create Order

3.2.4.1 Overview

The purpose of the **Create** capability is to generate an order that includes the **customer** related to the order, the selected **Product Offering**, and its associated **products**.

Before the order is officially created in the system, a **validation process** is performed to ensure that all necessary conditions and requirements are met.

Once the validation is successfully completed, the system proceeds with the **order creation** process.

The Create Order capability will return a generated **Order ID**, which can be served as the Reference ID.

3.2.4.2 Customization

Customer will be retrieved using **BCDB party** details API to ensure customer exist, as described in the **Browse Catalog** section.

3.2.4.3 Sequence Diagram

N/A

3.2.4.4 Integration Point

Functionality	Application	API	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Create Order	Amdocs Commerce	Product Ordering Management subdomain POST / productOrder	This operation creates a product order entity	Amdocs	EXP UI	REST	Synchronous	Southbound

3.2.4.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Successful Order Creation	GIVEN the customer attempts to create an order for a Product Offering	The customer party details are retrieved from the ABN AMRO BCDB system	the system successfully creates the order

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
customer does not exist	GIVEN the customer attempts to create an order for a Product Offering	the system attempts to retrieve customer party details from the ABN AMRO BCDB system AND the customer details cannot be retrieved	displays an appropriate error message and order is NOT created.

3.2.4.6 Screenshot (For Illustration only)

N/A

3.2.5 View Summary

3.2.5.1 Overview

This capability enables the retrieval of a specific product order using its **Order ID**, allowing for the fetching of the full order details, which include the product structure, selected configurations, associated pricing (if applicable), order status, and relevant dates.

This process ensures that all aspects of the order, from initial selection to completion, are comprehensively retrieved for further processing or review.

The product order includes the following main information:

- **Order ID** – A unique identifier assigned by the Ordering Digital ONE system.
- **Order Dates** – Includes the creation, submission, and completion dates of the order.
- **State** – The current status of the order (e.g.: *Draft, Submitted, InProgress, Completed*).
- **Order Items** – The selected items, along with their default configurations and pricing (if applicable).
- **External IDs** – Identifiers associated with the product order and order items for integration with external systems.
- **Characteristics** – Additional attributes defined for the product, such as the Terms & Conditions URL and other relevant details

3.2.5.2 Customization

N/A

3.2.5.3 Sequence Diagram

N/A

3.2.5.4 Integration Point

Functionality	Application	API	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Retrieve Order Details	Amdocs Commerce	Product Ordering Management subdomain GET / productOrder/{id}	Retrieve the order details by order id including items and its prices	Amdocs	EXP UI	REST	Sync	Southbound

3.2.5.5 Acceptance Criteria

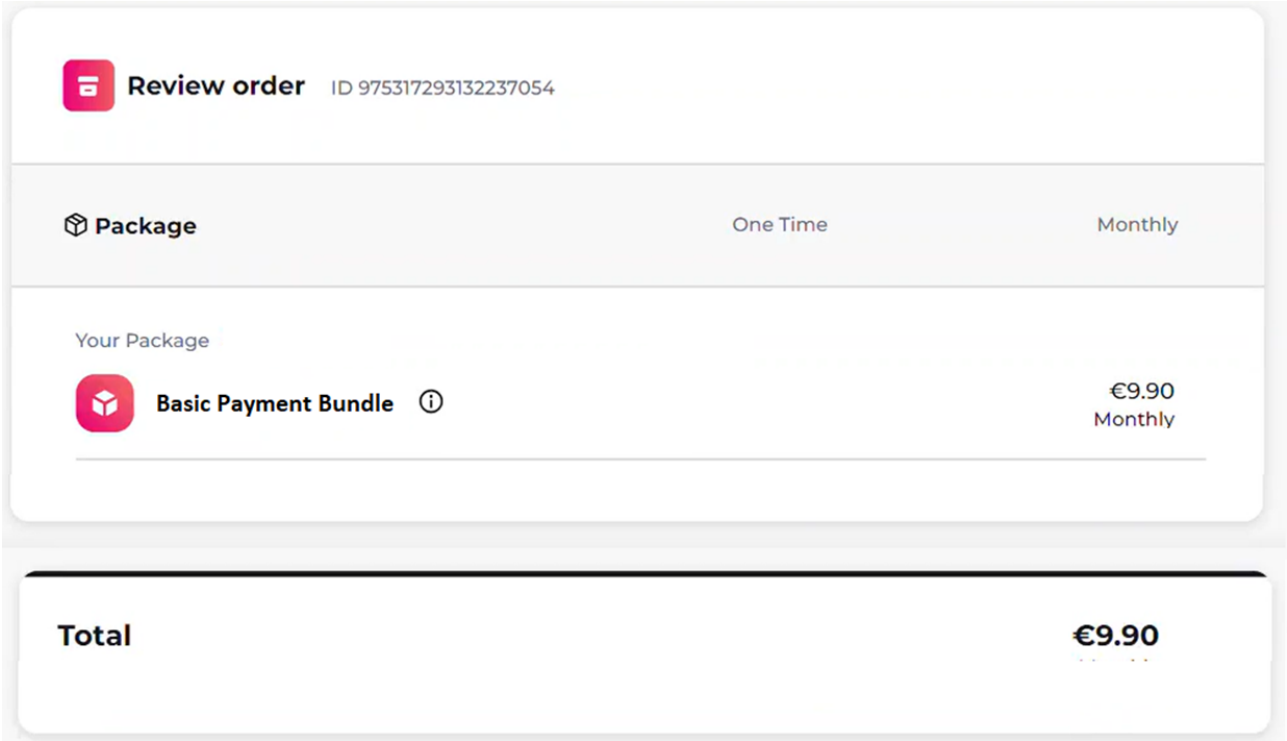

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Successful Retrieval of Product Order Details	GIVEN the user retrieves the product order	a valid Order ID is provided	The system successfully fetches the full details of the order. The full data of the order is retrieved, including the product structure, order dates, state, characteristic, external ids, and prices (if applicable), customer id.

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
Order ID Not Found	GIVEN the user attempts to retrieve the product order	a non-existent Order ID is provided	The system returns an error indicating that the Order ID was not found

3.2.5.6 Screenshot (For Illustration only)

3.2.6 Order Submission

3.2.6.1 Overview

This capability enables the submission of a product order after it successfully passes validation. Once submitted, the order is processed by **Amdocs Order Management**, which initiates, orchestrates, and tracks the order flow required for fulfillment.

Upon submitting a product order, the following main validations will be performed:

- An empty product order cannot be submitted.
- The order must be in a draft state.

3.2.6.2 Customization

N/A

3.2.6.3 Sequence Diagram

N/A

3.2.6.4 Integration Point

Functionality	Application	API	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
Submit Order	Amdocs Commerce	Product Ordering Management subdomain POST ../productOrder/{id}/submitOrder	This operation submits a product order entity to Amdocs Order Management for its fulfillment. The state of the product order entity is set to <i>Submitted</i> .	Amdocs	EXP UI	REST	Sync	South bound

3.2.6.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Successful Order Submission	GIVEN the customer submits the order	WHEN a product order is in a draft state AND it contains at least one product Catalog ONE for the submission stage	THEN the system successfully processes the order submission AND forwards it to Amdocs Order Management for fulfillment

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
Order Submission Fails Due to Incorrect Order State	GIVEN the customer attempts to submit the order	WHEN the product order is not in a draft state	THEN the system rejects the submission AND displays an error message indicating that the order must be in a draft state for submission

3.2.6.6 Screenshot (For Illustration only)

N/A

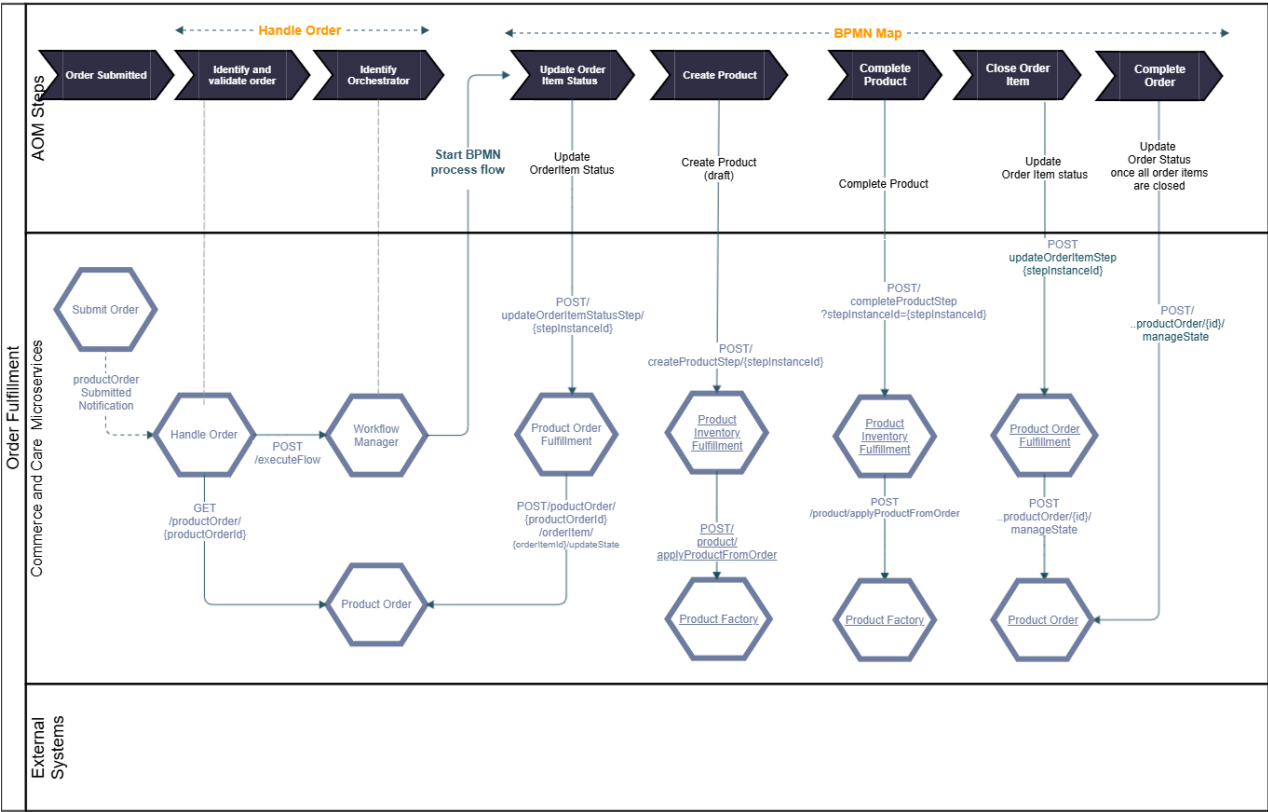

4 D1 Order Fulfillment

4.1 Overview

This chapter describes the order Handling flow including the logical step, and the integration points to the Amdocs Microservices & ABN AMRO Systems.

Integration points for fulfilment will be handed in Epic OH_01.

4.2 Flow Diagram

4.3 Solution Details

4.3.1 Order Handling Foundation

4.3.1.1 Overview

The Order fulfillment process initiates and handles the order flow required for the fulfillment, after the order submitted by the user.

The Order Fulfillment process consists a set of functional capabilities (steps) including updating external systems, processing the order, Order Tracking, fallout, etc.

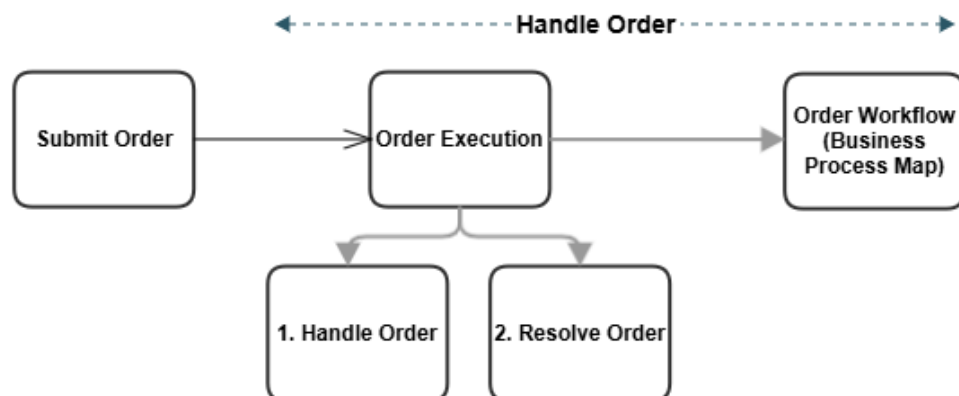

The main steps once the order is submitted: Order Execution (Handle Order) and Resolver (Resolves the order by deciding which flow to execute/ Which BPMN to run)

4.3.1.2 Customization

The new BPMN process will include of 2 order items that should be fulfilled - Payment Account and the Debit Card.

The Payment Account fulfillment must be completed before continuing to the Debit card fulfillment. This dependency will be defined via the configuration.

4.3.1.3 Diagram

4.3.1.4 Integration Point

None, integration to external system will be handled in a separate EPIC.

4.3.1.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
Fulfillment of Bundle PO	Given that client wished to submit an order of Bundle PO	submit operation is invoked	Fulfillment for is processed and product inventory for the bundle PO is created in DigitalONE Verify that the new Product Inventory of the Payment Account is created and includes: a. The correct Customer ID Verify that the new Product Inventory of the Debit Card includes: a. The correct Customer ID b. The relation to the Payment Account PI

Rainy Day Scenario - N/A for the epic.

Test Name	GIVEN	WHEN	THEN

5 D1 Product Inventory

5.1 Overview

The Product Inventory Management domain is responsible for tracking customer-owned products in DigitalONE.

Product Inventory entities are created based on the product order information after order submission & fulfillment.

The product inventory includes the configured product, such as configured characteristics, resource such as IBAN, customer services (if applicable).

Although Digital ONE stores the product inventory, the master record of customer-owned products remains in ABN AMRO system.

5.2 Flow Diagram

N/A

5.3 Solution Details

5.3.1 Search Product Inventory

5.3.1.1 Overview

The system provides customers with the ability to view a comprehensive list of their own products stored in Digital ONE.

Although Digital ONE stores the product inventory, the master record of customer-owned products remains in ABN AMRO System.

5.3.1.2 Customization

N/A

5.3.1.3 Sequence Diagram

N/A

5.3.1.4 Integration Point

Functionality	Application	API	Description	Provider	Consumer	Interface Type	Mode	Integration Direction
searching for product list	Amdocs Commerce	Product Inventory Management subdomain GET .../ product	This operation lists or locates product entities. the service receive a filter criteria, the customer ID can be passed on the criteria for getting the customer associated products instance from Digital ONE.	Amdocs	EXP UI	REST	Sync	Southbound

5.3.1.5 Acceptance Criteria

Sunny Day Scenario

Test Name	GIVEN	WHEN	THEN
existing customer having a payment account and debit account	Given that client wishes to view if a customer has service or not	client want to show the customer existing products from Digital ONE	the client will a list of products instance associated to the customer (payment account and debit card)

Rainy Day Scenario

Test Name	GIVEN	WHEN	THEN
new customer no product	Given that client wished to view if a customer has service or not	customer want to apply for a new bank account	the client will get an empty list of product instance associated to the customer

6 Product Catalog

6.1 Product Offering

The **Basic Payment Bundle** will be modeled in C1 with 2 Products:

- Payment Account - Primary
- Debit Card - linked to the Payment Account

Product Offering will include the following main information:

- **Product Offering Name and Localized Name:** The official name and localized name display name of the product offering, as defined in the catalog.
- **Product Description:** A detailed description of the product offering, outlining its features, benefits, and intended use, as configured in the catalog.
- **Related Products:** the associated products.
- **Characteristics-** List of characteristics for the product offering.
- **Pricing Information:** Any associated RC pricing
- **External IDs** – Identifiers associated with the product order and order items for integration with external systems.

6.2 Characteristic & Metadata

During the discovery stage, end-users can search, filter, and view detailed information about product offerings.

Filtering, searching, and viewing can be based on the characteristics of either the product offering or its product specifications. This is enabled by defining dedicated metadata at the characteristic level, which is part of the overall metadata definition.

Metadata Definitions:

- **Filterable** – A characteristic that can be used as a filter.
- **Visible** – A characteristic displayed on the product offering details page.
- **Visible in Highlight** – A characteristic displayed in the product offering list.

Product Offering Search – Users can search based on the product offering's name, description, and searchable characteristics.

Product Offering Details – When viewing a product offering, only characteristics marked as "Visible" at the offering level will be shown.

[Example of Metadata Definition](#)

< | **Discovery** | Contracted Offer | Product | > | ▼ | ≡ | ≡

Group by: Characteristics ▼

▼ **Internet Banking**

A	B
Property	Value
Filterable	True
Visible	True
Visible In Highlights	True

6.3 Browsing Categories

- Browsing and navigating categories, along with the associated filter characteristics.
- create and associate the Offering with the categories to enable the consumers to browse and navigate through the available product offers.

7 ABN AMRO Systems

7.1 Overview

Following are the external systems used by Amdocs Ordering Systems:

System	Interface Description	Provider OAR ID	Provider	Consumer	Integrations Direction
BCDB AMRO Business Customer DB	A set of APIs to retrieve of ABMN AMRO customer information. Amdocs Ordering will integrate with BCDB APIs to retrieve Customer Info.	AAB.SYS.01845	ABN AMRO	Amdocs Ordering	Southbound

7.2 Operations

7.2.1 BCDB - retrievePartyDetails

7.2.1.1 Overview

Operation	Party Management AP -> retrievePartyDetails
Provider	ABN AMRO
Interface Type / Mode	SOAP / Sync
Description	Operation is used for customer party details retrieval from ABN AMRO system

Additional Information	It will be invoked by Custom Customer MS through GET /customer{id} operation and will be used for: • Customer Order – Relating the order to the customer, ensure the ABN AMRO customer exists. • C1 Qualification Rules – Accessed via Customer Accessor, which defines the specific customer party attributes required for rule execution.
-------------------------------	--

7.2.1.2 Main Input

Attribute name	Mandatory/Optional	Description	Example	Additional Information
partyId.value	Mandatory	ABN AMRO Customer ID. Unique identifier (BC Number) of the customer.		In case it is required, the same input will be used to retrieve: • Family Owner – The individual who logs in and places the order on behalf of a family member or himself. • Receiver (BC ID) – The person to whom the product will belong, which can be either a family member or the person placing the order.
selectPartyFlag	Optional	Indicator to request the core details about party	true	D1 will send always true
selectSegmentation Flag	Optional	Indicator to request the details of the different segmentations to which the party is classified.	true	D1 will send always true

7.2.1.3 Main Output

Attribute Name	Description	D1 Entity Mapping	Example	Additional Information
customerid	Unique identifier for ABN AMRO customer	customerId		
registrationStatus	Level 1 indicate that a minimal amount of information is registered. Level 2 indicates more information is provided, however ID&V is not yet succeeded. Level 3 all client information is provided, ID&V is done, however Dual control still need to be performed. Level 4 the onboarding process is succeeded. The only way is up, you will never go down when you are at level 4.	extensions.registrationStatus	4 (Registration Completed)	customer.status will also be set to active
appearanceType	Customer appearance	extensions.appearanceType	1 (Natural Person)	
relationCategory	Classification of clients in internal relation groups.	extensions.relationCategory	20 (Retail customer)	
clientGroupCode	classification of client groups into economic sectors according to the guidelines of the Dutch Bank (DNB) and the Central Bureau of Statistiek (CBS).	extensions.clientGroupCode		

Attribute Name	Description	D1 Entity Mapping	Example	Additional Information
dateBirth	date of birth of the person	engagedParty.birthdayDate		Age will be used in C1, for Qualification (when applicable)
deceaseDateExists	Relevant for physical person. Not relevant for companies etc (always FALSE in these cases).	engagedParty.deathDate		isAlive will be used in C1, for Qualification (when applicable)

8 Operational Aspects

8.1 Non-Functional

8.2 Authorization & Security

- Solution will integrate with ABN AMRO Bank's user administration and authentication systems
- Solution will use Single-Sign-On (SSO)

8.3 Multi-lingual

Will be handled in a separate EPIC

8.4 Error Handling

Will be handled in a separate EPIC

8.5 Performance

N/A

8.6 Migration Impact

Not Applicable.

11.1.2 Assumptions

11.2 Amdocs Customization & Certification

11.2.1 Feature List

Module	Feature Name	Description	Operation	Type	External Integration
Product Offering Discovery	Browsing Category	Certified the Product Offering Discovery MS & Category operations	GET /category, GET /category/{id},	OOB	
Product Offering Discovery	Offer List	Certified the Product Offering Discovery MS & Product Offering operations for anonymous customer. - Product Offering List (filter & sort) - Product Offering Details	GET /productOffering, GET /productOffering/{id}	OOB	
Care	GET Customer Details & Customer Accessor	Implementation of New Customized GET /customer/{id} Operation A new customized GET /customer/{id} operation will be implemented to support ordering operations, including create, validate, and submit order, via the Customer Accessor Microservice (MS). The Get Customer operation will: - Invoke the BCBD API to retrieve party details. - Support simulator mode and caching for improved efficiency. In addition, Define Customer Accessor Parameters, which will be used by the qualification rules to determine eligibility based on party details	GET /customer/{id} GET entityAccessor/customer	Cust	ABN AMRO CM

Module	Feature Name	Description	Operation	Type	External Integration
Product Offering Discovery	Offer List	Certified the Product Offering Discovery MS & Product Offering operations for existing customer. - Product Offering List (filter & sort) - Product Offering Details	GET / productOffering, GET / productOffering/{id}	OOB	
Care	Get Billing Account	A new customized GET / billingAccount/{id} operation will be implemented to support ordering operations, including create, validate, and submit order. The Get Billing Account operation will return hardcoded data, including status and ratingType.	GET / billingAccount/{id}	Cust	N/A
Product Ordering Management	Create Order	The Create Order operation will be certified to ensure proper functionality and seamless integration with the ordering process. This includes the following steps: Validation: Ensure the order passes all necessary validation checks before being submitted. Order Creation: Confirm that the order is successfully created after passing the validation. End-to-End Testing: Perform thorough testing to verify that the order creation process works as expected across all scenarios, ensuring data integrity and accuracy.	POST /createOrder	OOB	

Module	Feature Name	Description	Operation	Type	External Integration
Product Ordering Management	Resource Reservation	New Microservice (MS) for IBAN Resource Reservation via CRC External System A new Microservice (MS) will be implemented to handle IBAN resource reservations through the CRC External System. The microservice will include the following features: • Simulator Support: The MS will support simulator mode to simulate the reservation process, allowing for testing without interacting with external systems. • IBAN Reservation Logic - If empty (IBAN not reserved): The MS will invoke the CRC External System to reserve the IBAN resource.	TBD	Cust	CRC (Reserve IBAN)
Product Ordering Management	View Order Details	Perform testing to ensure that the order details are accurately retrieved and displayed	GET ../productOrder	OOB	
Product Ordering Management	Submit Order	To ensure that order submissions are accurately processed, the following testing steps will be performed: Submission Validation: Verify that the order is correctly formatted and passes all validation checks before submission. Accuracy of Data: Ensure that all order details (e.g., products, customer ID) are correctly transmitted during the submission process.	POST ../submit	OOB	

Module	Feature Name	Description	Operation	Type	External Integration
Amdocs Ordering Management (OH)	Foundation (Platform setup)	A new Camuda map will be created for Bundle Fulfillment, responsible for managing the creation of the product inventory in DigitalONE. The map will automate the process, ensuring that product inventory is consistently created when a bundle is fulfilled, reducing manual intervention and enhancing system efficiency. The integration with external systems will be managed in a separate EPIC	N/A	Cust	N/A
Amdocs Ordering Management (OH)	Order Handling - Foundation (New Map)	A new Camuda map will be created for Bundle Fulfillment, responsible for managing the creation of the product inventory in DigitalONE. The map will automate the process, ensuring that product inventory is consistently created when a bundle is fulfilled, reducing manual intervention and enhancing system efficiency. Integration to external System will be handled in a separate EPIC. The integration with external systems will be managed in a separate EPIC	N/A	Cust	

11.2.2 Customization Solution Details

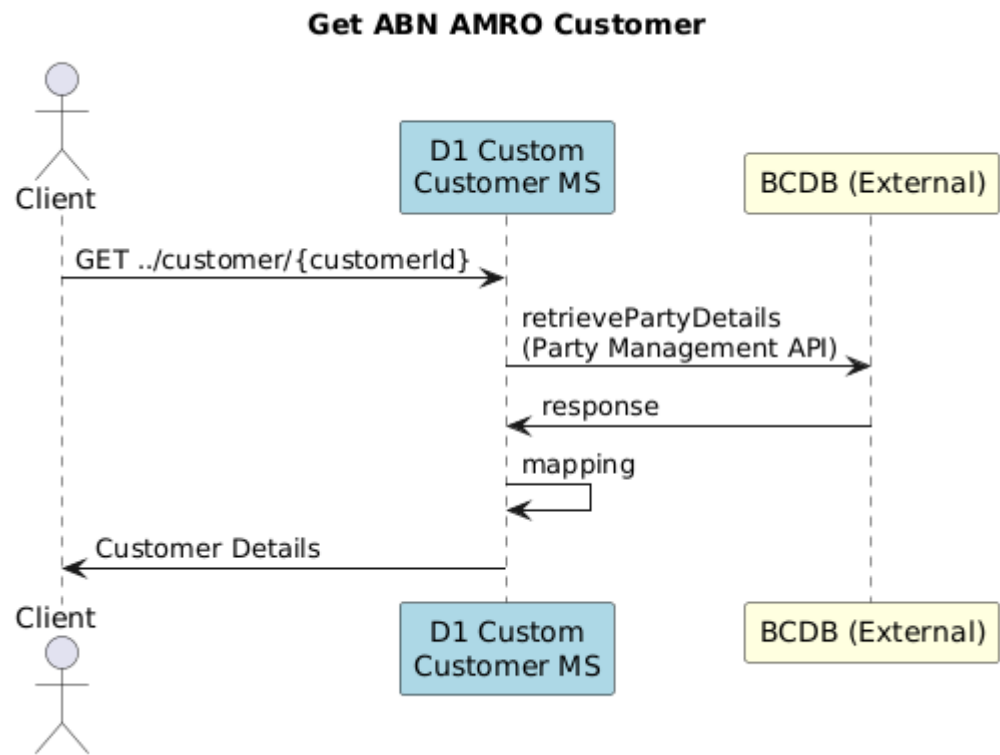

11.2.2.1 GET /customer/{id} & GET /entityAccessor/customer

In the ABN AMRO project, CM entities are maintained by ABN AMRO, thus retrieval CM operation used by Amdocs Ordering System will be customized:

11.2.2.1.1 Description

In ABN AMRO project, the GET ../customer/{id} operation will integrate to ABN AMRO APIs to retrieve customer data:

11.2.2.1.2 Diagram

11.2.2.1.3 Integration Point

Functionality	Application	API	Description	Additional Information
Get Customer Details	ABN AMRO	Party Management API (SOAP)	This operation allows the consumer to retrieve the details of an Agreement party cluster (ABN AMRO Customer)	

11.2.2.1.4 Mapping Attributes

D1 Entity Attributes	Mapping Value	Source	Description
customerId	customerid	ABN AMRO Party API	Unique identifier for ABN AMRO customer
customer.type	TBD		Specifies whether a party is an INDIVIDUAL or an ORGANISATION. mapped to following D1 customer types: individual or organization / change reference.
customer.subType	TBD	N/A	
customer.status	TBD	N/A	
extensions.registrationStatus	registrationStatus	ABN AMRO Party API	Trim the leading zeroes
extensions.ringfencingStatus	ringfencingStatus	ABN AMRO Party API	Trim the leading zeroes
extensions.relationCategory	relationCategory	ABN AMRO Party API	Trim the leading zeroes
extensions.age	Calculate the age from the birth date.	ABN AMRO Party API	Calculate the age from the birth date.
extensions.appearanceType	appearanceType	ABN AMRO Party API	
extensions.deceaseDateExists	deceaseDateExists	ABN AMRO Party API	Makes sense only on physical person. Not relevant for companies etc (always FLASE in these cases).

D1 Entity Attributes	Mapping Value	Source	Description
account.AccountRefOrValue.id	customerid	ABN AMRO Party API	Unique identifier for ABN AMRO customer
account.AccountRefOrValue.preferred	True		Set to TRUE Preferred Account id is retrieved when an order is created by the Customer Accessor.
account.AccountRefOrValue.type	TBD		TBD

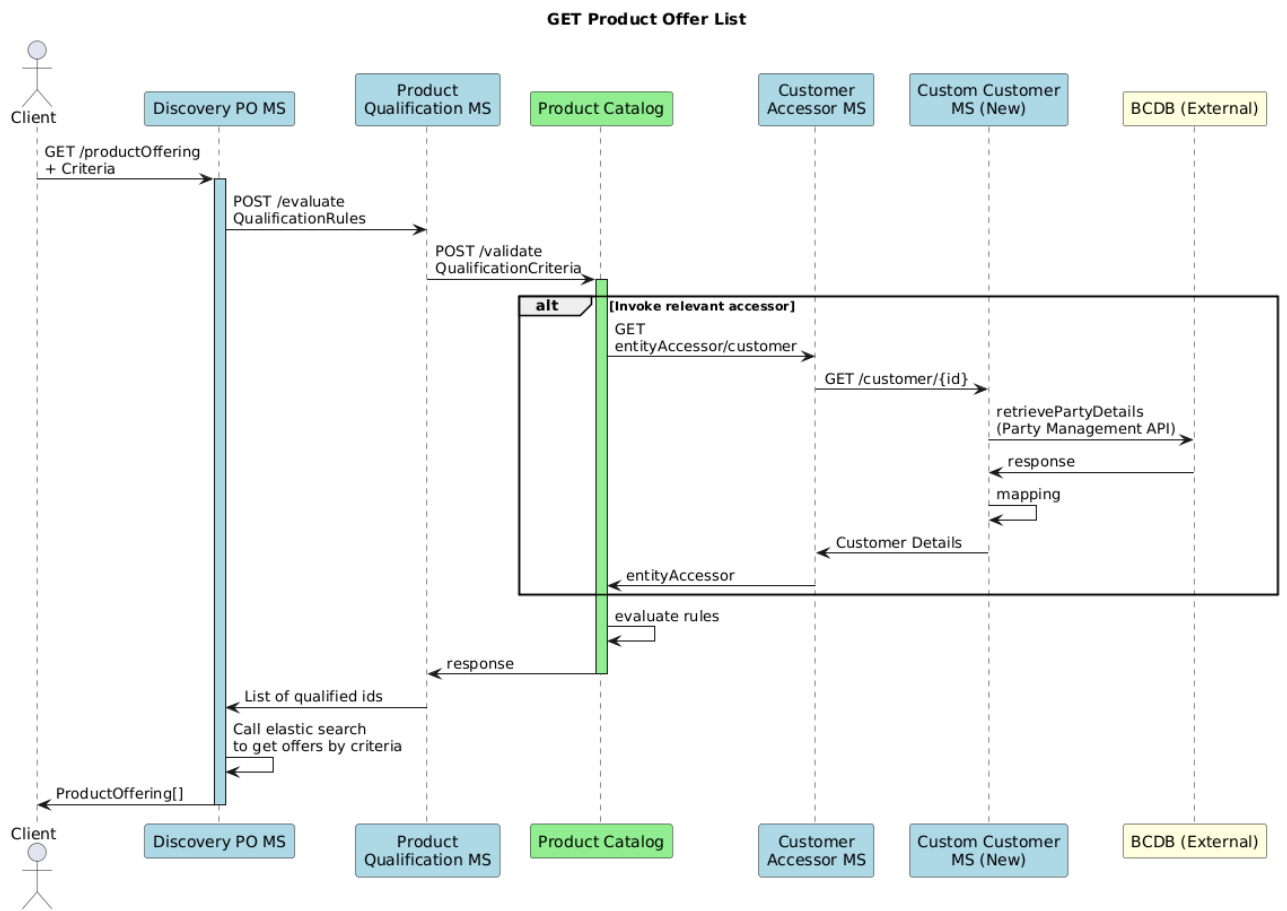

11.2.2.1.5 Acceptance Criteria

Test Name	GIVEN	WHEN	THEN
Customer retrieval - success	Given that client wished to get customer details	Custom Customer MS is invoked with ABN AMRO customer id	customer details is returned including: customer id, type, party id, KYCScore, clientGroupCode and status
Customer retrieval - failure	Given that client wished to get customer details	Custom Customer MS is invoked with a dummy customer id (customer id does not exist)	Error is returned.
Customer Retrieval via Customer Accessor	Given that client wished to get customer details	Custom Customer Accessor is invoked with ABN AMRO customer id	customer parameters are returned including - preferredBillingAccountId

11.2.2.4 Order Handling - Foundation (Platform setup) & New Map

11.2.2.4.1 Description

order management MS manage the order flow required for the fulfillment, after the order was submitted.

It include order retrieval and product inventory creation.

The Basic Package (PO Bundled) Ordering will includes the following main steps:

Dev Tasks:

1. Create a new Camunda map for the POTG of the new bundle - it will be used for onboarding of new Payment Account and Debit Card. (See Diagram section). The flow does not include external integrations.
2. Configure the map so it will start the second flow (order item of Debit Card) fulfilled after the completion of the first Order Item (Payment Account).

Implementation:

Flow Dependency

Business dependencies – The dependencies that are due to the business requirements, that are based on the `enabledBy` relationship. These dependencies are added as part of the `EnabledByDependency` strategy.

- `FlowStartOnFlowComplete` – Dependent flow does not start until the enabling flow is complete.

- `isProductOrderToBeCalled` – This flag is used if any strategy requires product order structure during runtime evaluation and saves the results in the local cache for the current transaction.

Technical dependencies of a flow or step, associated with `FlowContext` as part of the `CompositeFlowResolution` strategy, are configurable as per the following configurations:

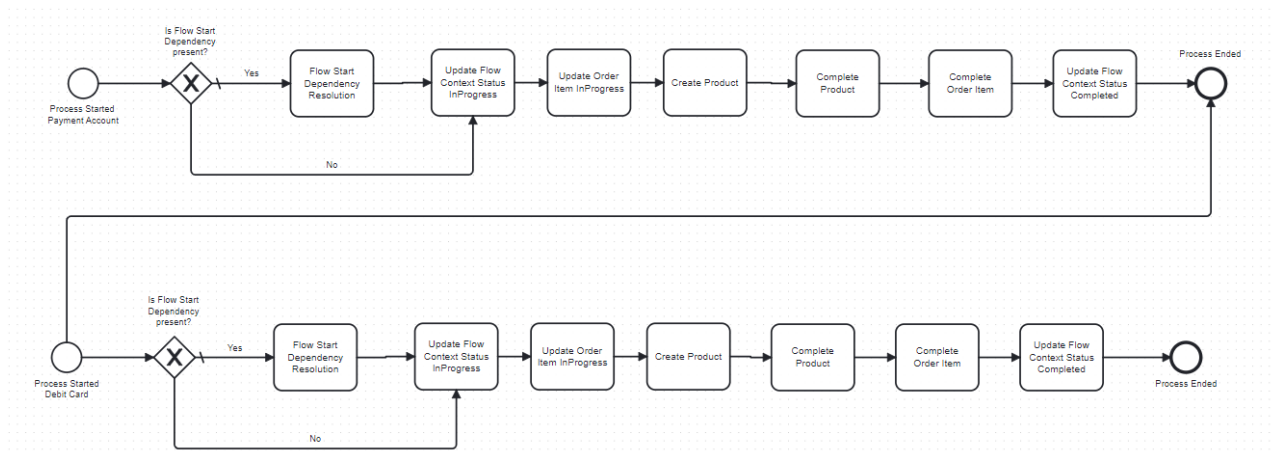

- `flowDependencyConfig` - type: `Dependency` , name: `FlowHierarchy` , status: `Defined` , `FlowStartOnFlowComplete`

Step Dependency

Within each flow of the order item, each step must start after the completion of the previous step.

This dependency will be defined via the configuration: **XXX**

11.2.2.4.2 Diagram

Camunda Step Details:

Step Name	Step Id	Description	Execution Type	Mandatory/ Conditional	Business Capability	OOB?	Invoke (Business activity Ms via business step subprocess)
